Which Companies Follow India's E-Waste (Management) Rules, 2022?

A compliance research brief on 10 Indian electronics manufacturers (reference list: Dixon, Kaynes, Sahasra, Centum, Avalon, Foxconn, Elin, Syrma SGS, Tata Electronics, VVDN)

1. Purpose & Method

This brief checks each of the 10 companies commonly listed as top Indian electronics manufacturers against the compliance obligations set out in the E-Waste (Management) Rules, 2022 (effective 1 April 2023) and CPCB's FAQ on the Rules. Under Rule 4, every Manufacturer, Producer, Refurbisher and Recycler of the Electrical and Electronic Equipment (EEE) listed in Schedule-I must register on the CPCB's E-Waste EPR Portal and meet phased Extended Producer Responsibility (EPR) recycling targets.

Because CPCB does not publish a full public list of registered entities searchable by company name, this research relies on each company's own public disclosures — principally the Business Responsibility and Sustainability Report (BRSR) that SEBI requires listed companies to file, plus company sustainability/CSR pages. A company being listed as a top manufacturer (e.g., in industry round-ups) is not itself evidence of E-Waste Rules compliance; that requires the company's own EPR disclosure.

2. Summary Table

Company	Listing Status	Registerable Category (Rules, 2022)	E-Waste Rules Compliance Signal Found	Basis / Notes
Dixon Technologies	Listed (BSE/NSE)	Manufacturer	Confirmed	BRSR (FY23-24) states EPR is applicable; waste collection plan aligned with the EPR plan filed with Pollution Control Boards; all plants are Zero Waste to Landfill.
Kaynes Technology	Listed (BSE/NSE)	Manufacturer	Confirmed	BRSR (FY23-24) confirms EPR applicability; waste is segregated at source and routed to authorised recyclers.
Syrma SGS	Listed (BSE/NSE)	Manufacturer (B2B/EMS)	Confirmed, with caveat	BRSR filings confirm EPR applies, but as a B2B contract manufacturer building to customer designs, the company states it has limited control/visibility over the end-of-life handling of finished goods once shipped to customers.
Centum Electronics	Listed (BSE/NSE)	Manufacturer	Confirmed	BRSR (FY25-26) confirms EPR applicability; company reports Zero Waste to Landfill status, hazardous waste sent for co-processing and non-hazardous waste to authorised recyclers.
VVDN Technologies	Private	Manufacturer/ Producer	Confirmed	Publishes a dedicated e-waste management page naming its registered recycling partner (a Haryana SPCB-registered recycler/dismantler) and describing its EPR/take-back process.
Avalon Technologies	Listed (BSE/NSE)	Manufacturer (EMS)	Not independently confirmed	Publicly files an annual BRSR as a listed EMS company (mandatory under SEBI LODR), but no company-specific e-waste/EPR disclosure text was located in this research.
Tata Electronics	Private (Tata Group)	Manufacturer	Not independently confirmed	No standalone e-waste/EPR disclosure found for this entity specifically; sister Tata companies (Tata Power, Tata Motors) publish clear e-waste policies, but this does not confirm Tata Electronics' own registration.
Foxconn India	Private (Foxconn/Hon Hai subsidiary)	Manufacturer	Not independently confirmed	No India-specific CPCB registration or e-waste disclosure was located; global parent Hon Hai publishes group-level ESG reports that are not

				India-entity specific.
Sahasra (Sahasra Electronics)	Private	Manufacturer	Not independently confirmed	No public sustainability report or EPR disclosure was located for this company.
Elin Electronics	Listed (BSE/NSE)	Manufacturer	Not independently confirmed	Listed status means a BRSR filing is mandatory, but no company-specific e-waste/EPR disclosure text was located in this research.

Green = the company's own public filing explicitly confirms EPR/e-waste compliance activity. Yellow = confirmed but with an important scope caveat. Grey = no company-specific compliance disclosure was found in this research; this reflects a lack of public data, not evidence of non-compliance -- private companies and some smaller listed entities do not always publish detailed environmental disclosures.

3. Company Notes

Dixon Technologies

- Confirmed. Dixon's BRSR filing states that EPR is applicable to its operations and that its waste collection plan is aligned with the EPR plan submitted to the Pollution Control Boards. All its manufacturing facilities are certified Zero Waste to Landfill, with disposal routed through Central/State Pollution Control Board-approved agencies.

Kaynes Technology

- Confirmed. Kaynes' BRSR (FY 2023-24) confirms EPR applicability and describes a structured waste management approach — segregation at source, safe disposal through authorised vendors, and employee training on waste handling.

Syrma SGS Technology

- Confirmed, with a scope caveat. Syrma SGS is registered and has disclosed EPR applicability in past BRSR filings. However, more recent filings clarify that as a B2B Electronics Manufacturing Services (EMS) provider building products to customer specifications, the company does not sell directly to end consumers and therefore has limited visibility into what happens to finished goods at end-of-life — a distinction relevant to how its EPR obligation is scoped versus a brand-owner producer.

Centum Electronics

- Confirmed. Centum's BRSR (filed July 2026, for FY 2025-26) confirms EPR applicability and reports Zero Waste to Landfill status, with hazardous waste sent for co-processing and non-hazardous waste routed to authorised recyclers.

VVDN Technologies

- Confirmed. Though privately held (so not required to file a BRSR), VVDN publishes a dedicated e-waste management policy page naming its recycling partner, a dismantler/recycler registered with the Haryana State Pollution Control Board, and describing its consumer take-back and reverse-logistics process — a materially transparent disclosure for a private company.

Avalon Technologies

- Not independently confirmed. Avalon is a listed EMS company (IPO 2023) and is required to publish a BRSR annually, but this research did not locate the specific text of its EPR/e-waste disclosure. This is a research gap, not a finding of non-compliance — given its listed status, an EPR disclosure almost certainly exists in its BRSR filing.

Tata Electronics

- Not independently confirmed. Tata Electronics is a private, unlisted Tata Group company and does not file a BRSR in its own name, so no standalone disclosure was found. Other Tata Group companies (Tata Power, Tata Motors) do publish detailed e-waste/EPR policies, but this does not stand in for Tata Electronics' own registration status. Separately, Tata's Voltas subsidiary (a different Tata company, air conditioners) is among several manufacturers that have legally challenged CPCB's revised EPR fee floor in the Delhi High Court — a sign of active, if contested, engagement with the Rules across the Tata group, though not proof of Tata Electronics' own compliance specifically.

Foxconn India

- Not independently confirmed. As an unlisted subsidiary of Taiwan's Hon Hai/Foxconn group, no standalone Indian e-waste/EPR disclosure was found. Hon Hai's global ESG/CSR reports are not broken out by Indian entity.

Sahasra (Sahasra Electronics)

- Not independently confirmed. No public sustainability report, CSR page, or EPR disclosure was located for this company in this research.

Elin Electronics

- Not independently confirmed. Elin is listed (IPO 2023) and therefore required to file a BRSR, but no company-specific e-waste/EPR disclosure text was located.

4. Key Pattern Observed

Compliance visibility tracks listing status and company size far more than product category. The four companies with the clearest public confirmation (Dixon, Kaynes, Syrma SGS, Centum) are all listed manufacturers filing SEBI-mandated BRSR reports, which force annual disclosure of EPR applicability under BRSR Principle 6. VVDN is the one private company with strong public disclosure, likely because it sells branded consumer-facing products (routers, cameras) and therefore runs its own visible take-back program. The remaining companies — mostly private, or subsidiaries of larger foreign or group entities — are plausibly registered (registration is legally mandatory for any Manufacturer/Producer under Schedule-I), but do not make that registration visible in public documents that this research could access.

5. Rule Basis for This Assessment

Registration requirement: Rule 4 of the E-Waste (Management) Rules, 2022 requires every Manufacturer, Producer, Refurbisher and Recycler of Schedule-I EEE to register on the CPCB E-Waste EPR Portal; a dismantler is not required to register. Recycling targets: EPR obligations are phased at 60% of e-waste generated for FY2023-24 and FY2024-25, 70% for FY2025-26 and FY2026-27, and 80% from FY2027-28 onward (or, for newer entrants, a sales-based formula under Schedule-IV). Disclosure mechanism: BRSR Section E / Principle 6, mandated by SEBI for listed companies, requires each entity to state whether EPR is applicable to it and whether its waste-collection plan matches the EPR plan filed with the Pollution Control Boards — this is the primary public document used to assess each company above. Registration fee basis: the CPCB Annexure-I fee schedule (Rs 2,500 to Rs 15,00,000, tiered by annual recycling target in MT) applies uniformly to all registered Producers regardless of company size, which is why registration status (not just company size) determines the fee a company must pay.

6. Limitations of This Research

- CPCB does not publish a full, searchable public registry of registered Producers/Manufacturers/Recyclers by name, so "not independently confirmed" reflects a lack of accessible public evidence, not a finding that a company is unregistered or non-compliant.
- Private companies (Tata Electronics, Foxconn India, Sahasra, and VVDN except for its own voluntary disclosure) are not required to publish BRSR-style disclosures, which limits what can be verified externally.
- BRSR text quoted or paraphrased here reflects the most recent publicly available filing found for each company at the time of this research and may not reflect the very latest filing.
