E-waste Assign.

Q-1] Compare the E-waste data of India with 5 other nations in the paper- reflect

⇒ a) India
- E-waste generated in 2019 → 3.23 million tonnes.
- Highest e-waste growth rate (~10.4% CAGR).
- Contributes ~6% of global e-waste but has a very
- ~~Contributes~~ ~ low formal collection rate (~1.3% in 2016).

b) China
- E-waste generate in 2019 → 10.13 million tonnes
- World's largest e-waste generator. Formal recycling (~16.1%) is much higher than India's although internal recycling is still significant.

c) United States
- E-waste generated in 2019 → 6.92 million tonnes
- second largest generator.
- Formal recycling is abaut 15.2% for better than India's
-

d) Japan
- E-waste generated in 2019 → 2.57 million tonnes
- Generates less e-waste than India and has strong legislation with 22.3% formal recycling.

e) Germany
- Produes less e-waste than, but generation has almost plateaued and recycles about 57.9% through the EU WEE system

g) UK 2019 → 1.60 million tonnes
- Produces abaut half of India's e-waste but has one of the highest recycling rates (56.6%) and under EU WEEE Directive

FOR EDUCATIONAL USE

Summary:
India has highest Growth rate of E-waste, but collection and recycling system is among the weakest

Q.2) 5 methods that can be implemented in India to reduce e-wast

1. Strengthen formal collection & recycling systems.
2. Implement and strictly enforce e-waste regulations
3. Promote reuse, repair, refurbishment and recycling
4. Adopt advanced and sustainable recycling technology
5. Increase public awareness and improve data collection.
